

EXPORT-CERTIFIED HEAT TREATMENT

Shipping products internationally requires meeting certain requirements, such as Standards for Phytosanitary Measures (ISPM) 15. At Lion Lumber, we make this easy for you with our certified International Plant Protection Convention (IPPC) heat treatment, which is performed in-house in our specialized oven. This process kills potentially embedded invasive species by exposing products to a minimum of 56°C (133°F). Our ISPM-compliant products are then stamped as required by the IPPC. To ensure consistent, quality performance, we perform monthly inspections and audits — giving you added peace of mind.

CUSTOMIZED PRODUCTS FOR YOUR EXACT NEEDS

At Lion Lumber, our relationship-oriented approach means we ensure our products meet your exact specifications. Our high-quality materials and customer service help you overcome any challenges throughout your project. And with our wide inventory, you can find everything you need to keep your job running smoothly.

Lagging Panels

Save time and money with pre-made lagging panels delivered to your jobsite in 48 to 72 hours. And since there's no on-site cutting necessary, you can rest assured your site is safer for your crews. Using lagging panels speeds up installation, allowing you to install pre-made walls in a matter of minutes. Lumber options include mixed hardwood or southern yellow pine.

Protective Shielding

With multiple options available, our shielding lumber is ideal for bridge, overpass, and ramp construction. We cut our lumber based on your specifications, with cut-to-length options including thickness from 2" to 6", lengths up to 20', and widths up to 12". You can also choose from mixed hardwood, or treated or untreated southern yellow pine based on your job requirements.

Sustainable Southern Yellow Pine Timbers

While it's considered a softwood, southern yellow pine is actually stronger than some hardwoods. Its density and overall strength can withstand tremendous pressure, making its timbers perfect for applications such as shielding. Because we use southern yellow pine from managed forests, these timbers are also more sustainable than non-renewable hardwoods. Southern yellow pine timbers come treated or untreated in multiple grades, with adjustable sizing available.

Pallets and Skids

Our standard pallets and skids are available in a variety of sizes and wood options. Pallets are built to your specifications, helping you meet all your shipping requirements with unmatched quality. For international use, our heat treatment process meets ISPM-15 standards, effectively killing any potential invasive species.

Lagging Lumber and Timbers

No matter your lagging needs, our lagging lumber will stand up to the job. Our inventory includes mixed oak and other hardwoods, southern yellow pine, and Douglas fir. We also offer a variety of standard sizes as well as lengths up to 40'. With quality lumber and construction for retaining walls and tunnel lagging, you can be confident in your jobsite's safety.

Coil Skids and Saddles

Get the structural support you need for heavy loads and help prevent damage to your products with our high-quality coil skids and saddles. All products can be specified by wood type, thickness, and size to meet your unique requirements. Stenciling and strap notching options are also available.

ADDITIONAL PROJECT ESSENTIALS

Our wide range of products can help you store and transport vessels, equipment, and pipes with ease. Our wedges, chocks, dunnage, tunnel ties, blocking, shims, pipe skids, jack supports, and more can all be custom cut to meet your sizing requirements.
